Extended Reach

Our Blood Armor Global Transport sets the standard for global blood transport, offering a full week of continuous cold chain protection. This allows blood products to be reliably transported to forward operating bases worldwide, arctic winter or desert summer, eliminating the logistical challenges of maintaining optimal temperatures.

Proven Technology

Built on a foundation of technology trusted by over 1,200 US hospitals and blood donor centers for the safe transport of more than 20,000 blood units per day and 23 million blood samples annually. The established reliability of the core technology ensures unparalleled service in the most critical conditions.

Versatile Operations

Designed from the ground up with direct input from all segments of the blood supply chain, the Blood Armor Global Transport excels in versatility. It meets the diverse needs of military operations, integrating seamlessly with existing logistics frameworks and enhancing operational efficiency across all branches of the armed forces.
